22. A plant cell having the vector of claim 20.

23. A method of regulating the expression of a nucleotide sequence of interest,
said method comprising stably incorporating in the genome of a plant cell a nucleotide
sequence of interest operably linked to a promoter comprising a nucleotide sequence of
claim 18, wherein said nucleotide sequence of interest is heterologous to said promoter.

24. The method of claim 23, further comprising contacting said plant cell with
a stimuli that induces expression of said nucleotide sequence of interest.
